

Keybridge FCC Build Summary

Run date: 01/24/2013

This program provides a count of wireless services originated from FCC database and a corresponding count of records successfully built and imported into the Key Bridge White Space database.

Summary counts are sorted by data source and wireless service type. The 'raw' column provides a count of records in the FCC source databases, while the 'cooked' column provides a count of records in the Key Bridge White Space database. Some wireless service types have been re-assigned to differentiate between analog and digital or between low power TV and TV Translators. In these cases the 'raw' or 'cooked' column may read zero.

The difference between columns is the number of records that failed the build process.
